Ex.No. 5 TEXT ANALYTICS UISNG tm AND SnowballC

```r
library(tm)

library(SnowballC)

# Input text

text <- paste(

  "Students are learning text analytics using R programming language.",

  "R programming language is very tough for I MSc ADs B.",

  "Kindly change the syllabus."

)

# Step 1: Create corpus

corpus <- VCorpus(VectorSource(text))

# Step 2: Convert to lowercase

corpus <- tm_map(corpus, content_transformer(tolower))

# Step 3: Remove punctuation

corpus <- tm_map(corpus, removePunctuation)

# Step 4: Remove stopwords

corpus <- tm_map(corpus, removeWords, stopwords("english"))
```

 # Step 5: Remove extra spaces

```
corpus <- tm_map(corpus, stripWhitespace)
```

 # Step 6: Stemming

```
corpus <- tm_map(corpus, stemDocument)
```

 # Step 7: Create Term–Document Matrix

```
tdm <- TermDocumentMatrix(corpus)
```

 # Step 8: Display processed text

```
cat("Processed text:\n")

print(as.character(corpus[[1]]))

inspect(corpus)
```

 # Step 9: Display Term–Document Matrix

```
cat("\nTerm–Document Matrix\n")

inspect(tdm)
```
