

Ex.No.2**VECTOR & LIST OPERATION IN R****# Vector input**

```
n <- as.integer(readline("Enter number of elements in vector: "))
```

```
vec <- numeric(n)
```

```
for(i in 1:n){
```

```
  vec[i] <- as.numeric(readline(paste("Enter element", i, ": ")))
```

```
}
```

```
print(vec)
```

```
cat("Sum:", sum(vec), "\n")
```

```
cat("Mean:", mean(vec), "\n")
```

```
cat("Min:", min(vec), "\n")
```

```
cat("Max:", max(vec), "\n")
```

```
cat("Sorted Vector:", sort(vec), "\n")
```

Appending elements

```
val <- as.numeric(readline("Enter a value to append: "))
```

```
vec <- append(vec, val)
```

```
print(vec)
```

```
cat("\n===== LIST OPERATIONS =====\n")
```

List input

```
name <- readline("Enter name: ")
```

```
age <- as.integer(readline("Enter age: "))
```

```
marks_count <- as.integer(readline("Enter number of marks: "))
```

```
marks <- numeric(marks_count)
for(i in 1:marks_count){
  marks[i] <- as.numeric(readline(paste("Enter mark", i, ": ")))
}
```

```
list_data <- list(
  Name = name,
  Age = age,
  Marks = marks
)
print(list_data)
```

Updating list element

```
new_lang <- readline("Enter a programming language to add: ")
list_data$Language <- new_lang
print(list_data)
```
