

Ex. No. 4:

MARK STATEMENT PROGRAM

Number of students

```
students <- as.integer(readline("Enter number of students: "))
```

Number of subjects

```
subjects <- as.integer(readline("Enter number of subjects: "))
```

```
for(stu in 1:students){
```

```
  cat("\n--- Student", stu, "---\n")
```

Student name

```
name <- readline("Enter student name: ")
```

```
marks <- numeric(subjects)
```

```
total <- 0
```

Read marks

```
for(i in 1:subjects){
```

```
  marks[i] <- as.numeric(  
    readline(paste("Enter mark for subject", i, ": "))  
  )
```

```
  total <- total + marks[i]
```

```
}
```

Calculate average

```
average <- total / subjects
```

Result calculation

```
result <- "PASS"
for(i in 1:subjects){
  if(marks[i] < 35){
    result <- "FAIL"
    break
  }
}
```

Display mark statement

```
cat("\n===== MARK STATEMENT =====\n")
cat("Student Name :", name, "\n")
cat("Marks      :", marks, "\n")
cat("Total Marks :", total, "\n")
cat("Average    :", average, "\n")
cat("Result     :", result, "\n")
}
```
